

Gym Membership Management

Objective:

The Gym Membership Management System is a Salesforce application developed to manage gym members, trainers, membership plans, and memberships efficiently.

It helps the gym maintain member records, assign trainers, manage plans, and track memberships.

Data Modeling:

Data Modeling is the process of designing objects, fields, and relationships to store business data efficiently in Salesforce.

The Gym Membership Management application consists of four custom objects: Members, Trainers, Membership Plans, and Membership Details. These objects are used to manage member information, trainer details, available membership plans, and membership transactions.

SOQL

Definition: SOQL (Salesforce Object Query Language) is used to retrieve records from Salesforce objects.

Query 1 – WHERE Clause

Purpose

Retrieve active memberships.

Developer Console - Google Chrome

vishnuinstituteoftechno-24c-dev-ed.develop.my.salesforce.com/_ui/common/apex/debug/ApexCSIPage

File Edit Debug Test Workspace Help < >

Membership_Details__c@5:22 PM Members__c@5:23 PM

SELECT Id, Name FROM Membership_Details__c WHERE Status__c='Active'

Query Results

Id	Name
----	------

Query Grid: Save Rows Insert Row Delete Row Refresh Grid

Logs Tests Checkpoints **Query Editor** View State Progress Problems

```
SELECT Id, Name
FROM Membership_Details__c
WHERE Status__c='Active'
```

Any query errors will appear here...

Execute Use Tooling API

Query 2 – ORDER BY

Purpose

Retrieve the latest members.

File Edit Debug Test Workspace Help < >

Membership_Details__c@5:22 PM Members__c@5:23 PM

SELECT Id, Name FROM Members__c ORDER BY CreatedDate DESC LIMIT 5

Query Results - Total Rows: 2

Id	Name
a0Hg7000014nvyEAI	Rahul
a0Hg7000014jE5EAI	Crossfit

Query Grid: Save Rows Insert Row Delete Row Refresh Grid Access in Salesforce Create New Open Detail Page Edit Page

Logs Tests Checkpoints **Query Editor** View State Progress Problems

```
SELECT Id, Name
FROM Members__c
ORDER BY CreatedDate DESC
LIMIT 5
```

Any query errors will appear here...

History

Executed

SELECT Id, Name FROM Membership_Details__c WHERE Status__c='Active'

SELECT Id, Name FROM Members__c ORDER BY CreatedDate DESC LIM...

Query 3 – Relationship Query

Purpose

Retrieve member, trainer, and membership plan.

The screenshot shows the Salesforce Developer Console interface. The top bar indicates the user is logged in as 'vishnuinstituteoftechno-24c-dev-ed'. The main window displays a query result for the query: `SELECT Name, Members__cName, Trainer__cName, Membership_Plans__cName FROM Membership_Details__c`. The query results are displayed in a table with 4 columns: Name, Members__cName, Trainer__cName, and Membership_Plans__cName. The results show a single row with the following data: Name: Yearly, Members__cName: sathvik, Trainer__cName: Niktha, and Membership_Plans__cName: Crossfit. The bottom panel shows the query editor with the same query and a history panel on the right.

Name	Members__cName	Trainer__cName	Membership_Plans__cName
Yearly	sathvik	Niktha	Crossfit

Query 4 – Aggregate Query

Purpose

Count total members.

The screenshot shows the Salesforce Developer Console interface. The top bar indicates the user is logged in as 'vishnuinstituteoftechno-24c-dev-ed'. The main window displays a query result for the query: `SELECT COUNT(Id) FROM Members__c`. The query results are displayed in a table with 1 column: count(Id). The results show a single row with the following data: count(Id): 2. The bottom panel shows the query editor with the same query and a history panel on the right.

count(Id)
2

Query 5 – Comparison Operator

Purpose

Retrieve memberships where Amount Paid is greater than or equal to 10000.

The screenshot shows the Salesforce Developer Console interface. At the top, the browser address bar displays the URL: `vishnuinstituteoftechno-24c-dev-ed.develop.my.salesforce.com/_ui/common/apex/debug/ApexCSIPage`. The console has several tabs open, with the active tab being `Membership_Details__c@5:32 PM`. The main area shows the query results for the query: `SELECT Name, Amount_Paid__c FROM Membership_Details__c WHERE Amount_Paid__c >= 10000`. The results table has two columns: `Name` and `Amount_Paid__c`. The first row shows the name `Yearly` and the amount `12000`. Below the results, there is a `Query Editor` tab with the same query text. To the right, a `History` panel shows a list of executed queries, including the current one. At the bottom, there is an `Execute` button and a checkbox for `Use Tooling API`.

Name	Amount_Paid__c
Yearly	12000

Apex:

Definition: Apex is Salesforce's object-oriented programming language used to implement business logic.

Examples

- Creating records
- Updating records
- Deleting records
- Calling SOQL
- Writing triggers

Trigger

Definition: A Trigger executes automatically when records are inserted, updated, or deleted.

Example

Prevent duplicate memberships.

Reports:

Reports in Salesforce are used to organize, filter, and display data from Salesforce objects. They help users analyze information and make informed business decisions.
